Intensive vs. Extensive

Intensive

- Required for sustaining high population densities
- Inputs
 - Design: high
 - Labor: high
 - Capital: high
 - Water: low overall
 - Soil: high fertility required
 - Chemicals: used extensively
- Outputs
 - High per unit of area

Extensive

- Practiced in areas of relatively low population density
- Inputs
 - Design: low
 - Labor: low
 - Capital: low
 - Water: high overall
 - Soil: low fertility required
 - Chemicals: not generally used
- Outputs
 - Low per unit of area
